### **IHST Now Offers 21 Safety Bulletins Focused on Saving Lives**

The International Helicopter Safety Team (IHST), in cooperation with safety experts from throughout the civil helicopter industry, has developed a family of safety bulletins aimed at enhancing helicopter operations and reducing accidents.

Each safety bulletin provides a wealth of concise information that helicopter operators will be able to use for general reference and as a training tool and to support the prevention of helicopter accidents. They are accessible within the “Resources” section of the IHST web site ([www.IHST.org](http://www.IHST.org)). The group includes 13 safety bulletins developed by the IHST’s affiliate in the United States and eight safety leaflets released by its European affiliate. The topics are:

#### U.S. Safety Bulletins

(Link to documents: <http://www.ihst.org/Default.aspx?tabid=3089&language=en-US>)

- Surviving an Autorotation
- Entry into Cloud or Fog
- How Controlled Flight into Terrain Occurs
- Density Altitude
- Emergency Decision Making
- Energy in Autorotations
- Gaining Control over Loss-of-Control Accidents
- Preventing Controlled Flight into Terrain
- A Defensive Strategy for Helicopter Pilots
- Visibility and Minimums
- Training Safely
- Recurrent Training
- Autorotation Acronyms

#### European Safety Leaflets

- Single Pilot Decision Making
- Risk Management in Training
- Advantages of Simulator Training
- Off Airfield Land Site Operations
- Advanced Navigation Technology
- Safety Management Tools
- Helicopter Airmanship
- Safety Considerations
